

Cosmetique AI — verification evidence

Date: 2026-07-29

Workspace: `C:\gf\_ai\_task\fully\_cloned\Stage\_1\_ouvrier`

Branch: `codex/implementation`

Operator: Cursor agent (handoff finish)

Claims below name the exact command and result. Unchecked external gates are not inferred as done.

CPU / unit layers

· Gate · Command · Result ·

· --- · --- · --- ·

- ai_core · `ai\_core\venv\Scripts\python.exe -m pytest -q` · ****67 passed**** ·
- backend · `backend\venv\Scripts\python.exe -m pytest -q --basetemp C:\gf\_ai\_task\test\_tmp\_backend\_handoff\pytest` with `TMP`/`TEMP` under workspace · ****119 passed, 1 skipped**** ·
- frontend lint · `npm run lint` · ****exit 0**** ·
- frontend unit · `npm run test:run` · ****51 passed**** (12 files) ·
- frontend build · `npm run build` · ****exit 0**** ·
- frontend e2e · `npm run test:e2e` · ****15 passed**** (desktop/tablet/mobile) ·
- notebook · JSON load + AST parse of non-magic code cells · ****ok**** — 10 cells, 8 code, 0 saved outputs, 0 parse errors ·

Fixes applied during this verification:

- `ai\_core/tests/test\_orchestrator.py` — pass `background\_validator` stub; assert validate/unload events.
- `ai\_core/tests/test\_service.py` — busy job uses a distinct `request\_id` (idempotent replay is not 429).
- `docker/docker-compose.yml` — frontend healthcheck uses `127.0.0.1` instead of `localhost` (IPv6 refuse).

Hugging Face model pins

Tool: Hugging Face MCP `hub\_repo\_details` (user `jessem66`).

· Repo · License (Hub overview) · Pinned revision in `model\_registry.py` ·

· --- · --- · --- ·

- IDEA-Research/grounding-dino-tiny · apache-2.0 · `a2bb814dd30d776dcf7e30523b00659f4f141c71` ·
- facebook/sam-vit-base · apache-2.0 · `70c1a07f894ebb5b307fd9eaaee97b9dfc16068f` ·
- stabilityai/stable-diffusion-xl-base-1.0 · openrail++ · `462165984030d82259a11f4367a4eed129e94a7b` ·
- Qwen/Qwen2.5-7B-Instruct · apache-2.0 · `a09a35458c702b33eeacc393d103063234e8bc28` ·

Hub overview confirmed for all four. No weights downloaded in this run.

Docker smoke

Ephemeral `docker/.env` generated locally (gitignored). Placeholder Colab URL used.

· Step · Result ·

· --- · --- ·

- `docker compose ... config` · exit 0 ·
- `docker compose ... up --build -d` · exit 0 ·
- db · healthy ·

- migrations · exited 0 ·
- backend · healthy — `GET /health` → `{"status":"ok","version":"1.0.0"}` ·
- worker · healthy ·
- frontend · healthy after healthcheck fix — `GET /healthz` → `ok`; `GET /` → 200 ·
- Real Colab generation · **not executed** (placeholder tunnel) ·

Dependencies

- Check · Result ·
- --- · --- ·
- `pip\_audit -r backend/requirements.txt` · **No known vulnerabilities found** ·
- `pip check` (backend venv after reinstalling editable ai_core) · **No broken requirements found** ·
- `npm audit --omit=dev` · **2 high** — `react-router` / `react-router-dom` 7.18.x (GHSA-qwww-vcr4-c8h2, RSC Mode CSRF). App uses client SPA routing only (no RSC). Accepted for V1 handoff; upgrade tracked as follow-up. ·

Secret scan

Python walk of source tree excluding `.env`, `node\_modules`, `.git`, `dist`.

Hits limited to:

- `docker/.env` (local ephemeral, gitignored)
- `\*.env.example` placeholders
- `backend/tests/conftest.py` test DSN fixture

No unexpected live credentials in tracked source.

Explicitly not claimed

- Fresh Google Colab T4 **Run all**
- Live Quick Tunnel end-to-end generation
- Authorized 24-image private evaluation
- Provider-side rotation of historically exposed credentials
- Codex Security whole-repo scan (**waived by operator**)
- Fake-Colab Compose integration harness (does not exist; not built)
